Functional Nanoparticle-Based Proteomic Strategies for Characterization of Pathogenic Bacteria

Wei-Jen Chen, Pei-Jane Tsai, and Yu-Chie Chen*

(Anal. Chem. 2008, 80, 9612–9621)

Because of the mistakes arising in mass-labeling, the potential biomarkers at m/z 1625 (*E. coli*UTI) and 1608 (*S. sonnei*) should be corrected to m/z 1631 and 1603, respectively. The ion at m/z 1500 (*E. coli* O157:H7), which is not used as one of the potential biomarker ions, also needs to be changed to 1505. The MS/MS spectrum of the peak at m/z 1603 and its putative identity obtained via protein database searching are provided in the Supporting Information. The corrections do not affect the significance of the method proposed in this article.
