

Correction to Structural Characterization of Gangliosides and Glycolipids via Ultraviolet Photodissociation Mass Spectrometry

John P. O'Brien and Jennifer S. Brodbelt*

Anal. Chem. **2013**, *85*, 10399–10407. DOI: [10.1021/ac402379y](https://doi.org/10.1021/ac402379y)

In [Figure 2C](#) in the original manuscript, the dashed line that connects the label O18:1 to an ion peak should go from the

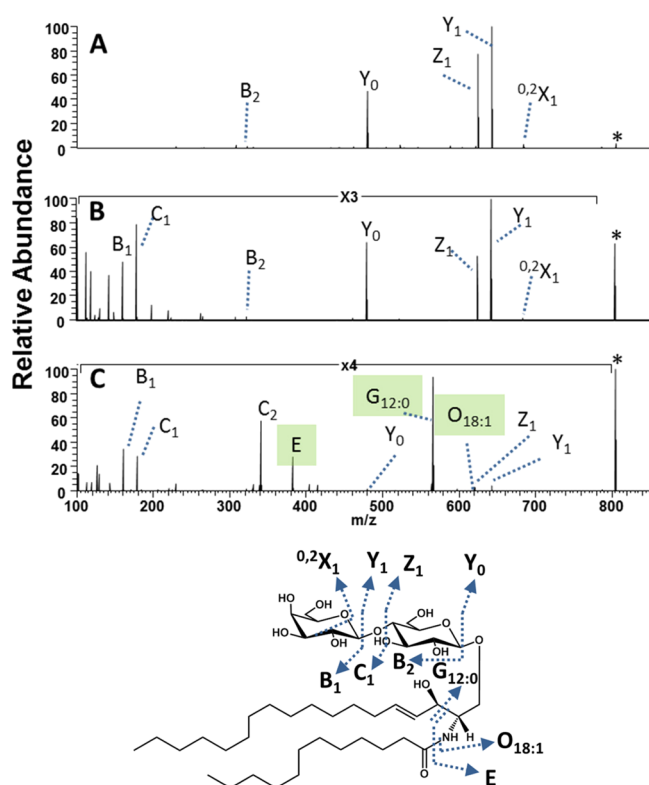

Figure 2. (A) CID, (B) HCD, and (C) UVPD mass spectra of the singly deprotonated sphingoglycolipid LacCer(d18:1/12:0). The precursor ion is labeled with an asterisk. A fragmentation map is shown below the spectra.

label to the ion cluster around m/z 620, not to the ion around m/z 597. The placement of the connecting line is incorrect, but there are no changes to the text or the interpretation, and the corrected [Figure 2](#) is as shown in this Addition and Correction.
