

PeakPro™ Finds the Peaks Ordinary Chromatography Data Systems Overlook.

PeakPro™ manages your chromatography data better so you can better manage your lab.

PeakPro integrates the most advanced analysis algorithms and the most sensitive and accurate A/D converter, so even complicated peak detection challenges like drifting baselines or overlapping peaks are no problem.

Better Peak Detection

To import data accurately and undistorted by noise, PeakPro relies on CHROM Link, a 25-bit A/D converter designed to assure that even the smallest chromatographic peak can be

quantitated. To ensure proper A/D performance, CHROM Link can be tested and validated on-line.

Better Reporting

PeakPro lets you run standard tabular, graphic and matrix reports, or create your own custom formats, using a fast, highly flexible *Ad Hoc* report writer. Summary and trend analysis reports can also be easily generated.

Better Methods Development

PeakPro streamlines methods development via a graphical interface that lets you simultaneously view a chromatogram and its peak detection/calibration method in real time. Experiment with your choice of manual or automatic integration and instantly view results on-screen. Solve even the

most difficult chromatographic problems and save the method for future use!

Better Get The Facts!

Find out more about PeakPro, the chromatography data system that draws conclusions where other systems draw a blank. Aids in GMP and GLP compliance. Designed with ISO 9001 in mind. PeakPro is a modular data management system for the chromatography QA, QC or R&D laboratory. Seamless integration with Beckman Lab Manager™ LIMS allows for smooth, uninterrupted data flow enterprise-wide. Get the facts, contact Beckman Instruments, Inc., 90 Boroline Road, Allendale, NJ 07401. (201) 818-8900.
