

# the ANALYST'S column

L.T. Hallett, Editor

WE KNOW that chess is played via mail, telegraph, and radio between players located in various parts of the world. We were unaware that it was practical to do cooperative research under similar conditions until we received a paper authored by research workers thousands of miles apart.

The details of this interesting effort were brought to light when one of our manuscript editors was checking on the proper way to set up the names and addresses on the title page. It seemed unusual that a research project was carried out simultaneously in laboratories in Auckland, New Zealand, and Bethesda, Md.

The paper, entitled "Infrared Absorption Spectra of Methylene-dioxy and Aryl Ether Groups," was authored by L. H. Briggs and L. D. Colebrook, Auckland University College, and H. M. Fales and W. C. Wildman, National Heart Institute (ANAL. CHEM., June 1957, page 904).

We asked Dr. Wildman for the details. Here is what he said:

Our writing this joint paper was brought about by a third party, Dr. Johnathan Hartwell of the National Cancer Institute. Dr. Hartwell had been corresponding for some time with Prof. Briggs in New Zealand on other research matters. In one letter Prof. Briggs mentioned that he was working on an infrared method to determine methylenedioxy and methoxyl groups. In discussing several research problems in which the Heart and Cancer Institutes had common interest, Dr. Hartwell mentioned Prof. Briggs' research problem. Since we were well under way in a similar problem, we agreed to do the paper jointly. It was not an easy task, since we were not able to have any long discussions about the work. One would mention an idea in a letter and a few facts to support it, then the other would follow it up and do more research which would be reported back. This in turn created new ideas and away we went.

Neither we, nor Dr. Wildman, rec-

## Self-Contained Hot-Wire-Type GLASS TUBING CUTTER

Produces Clean, Straight Breaks  
in Tubing up to 3 Inches in Diameter

Glass tubing bottles or jars up to 3 inches in diameter can be cut neatly and quickly with this cutter. Soft glass, Pyrex-brand glass, or other hard-glass tubes can be cut with equal ease. The article is first encircled with a scratch made by a cutter wheel conveniently mounted on the side of the transformer, the scratch is heated by contact with the hot wire, and then cooled quickly by applying water or by blowing on it. No other equipment is required.

The cutting wire is supported on two insulated posts and is heated by current from a 12-volt transformer serving as the base. No. 24 (B & S gauge) nichrome wire is used, and is easily replaced. Three extra wires are included. By means of an adjustment on the transformer, the current can be controlled to give the optimum heat for whatever type of glass may be used. An instruction plate is mounted near this control. The unit operates on 115 volts, 50 or 60 cycle A.C. Over-all dimensions are 6 x 4 1/2 x 9 inches high.

No. 5210

Each, \$29.50

## NEW TEMCO FLASK HEATER

already proved by "in-use"  
tests and nationwide acceptance

Several different flask sizes  
can be used in this unit.

Here's the greatly improved flask heater with interchangeable Monel mesh baskets that perfectly "nest" your flasks . . . and let you use several sizes in the same unit! Radiates heat uniformly to lower half of flask . . . minimizes "bumping." Easily replaceable heating element eliminates time and use losses. No fabrics to become shoddy, saturated, or worn. Heating chamber sealed to contain accidental spillage . . . easily cleaned. TEMCO Flask Heater is ruggedly built with stainless steel and buffed aluminum double-case construction. Well-ventilated . . . perforated outer shell never too hot to handle . . . table-top heat-protected attached support bracket. May be used with control unit shown below, or with other makes of controllers. Two models for all popular flask sizes: \$22.50 and \$34.50.

### New Controller for extremely fine control of flask heaters

Model 700 Temcometer power input controller of "off-on" type with completely stepless control and short time cycle. Permits exceptionally fine selection, close holding of desired temperature. Compensates automatically for wide fluctuations in voltage. Ideal companion unit for TEMCO Flask Heaters and other makes of heaters and mantles. Price complete with power and connecting cords, \$20.85.

Quality is assured under the TEMCO label.
